json javascript object notation is a lightweight format that is used for data interchanging it is based on a subset of javascript language the way objects are built in javascript as stated in the mdn

of course the correct mime media type for json is application/json but it's necessary to realize what type of data is expected in your application for example i use java ext gwt and the server

json is used a lot for application data and configuration settings so comments are necessary now the official spec is a nice idea but it's insufficient and obsolete so too bad minify your json if you're

oct 16 2009 json stems from javascript javascript object notation it only makes sense that it was originally adapted for use in javascript unfortunately as with all things related to javascript it has

may 11 2013 here i'm creating a javascript object and converting it to a json string but json.stringify returns object object in this case instead of displaying the contents of the object

356 a json string must be double quoted according to the specs so you don't need to escape if you have to use special character in your json string you can escape it using character see this list

do standards or best practices exist for structuring json responses from an api obviously every application's data is different so that much i'm not concerned with but rather the response

how can i display json in an easy to read for human readers format i'm looking primarily for indentation and whitespace with perhaps even colors font styles etc

json id camelcased conclusions choosing the right json naming convention for your json implementation depends on your technology stack there are cases where you can use snake case

sep 4 2020 json here goes your json object definition note this won't prettify the json representation to do so one can previously rely on an external service such as jsbeautifier.org and
